No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

pulp Thermomyces Modified xylanase; Thermomyces WO200192487-A2. 16-MAY-2002 AAE18456; 06-DEC-2001 AAE18456 standard; protein; 194 manufacture; lanuginosus. lanuginosus xylanase, (first poultry; thermostability; alkalophilicity; poultry; swine feed; enzyme; Xyn. entry) \$ χ Έ indu ıstrial process;

The present invention relates to a modified xylanase exhil thermostability and alkalophilicity. Modified xylanase is industrial process such as pulp manufacturing. Modified xy useful for bleaching of pulp, processing of precision devimproving digestibility of poultry and swine feed. Modificing improved performance at conditions of high temperature and exhibits improved thermophilicity and/or alkalophilicity corresponding native xylanase. The present sequence is The lanuginosus xylanase, Xyn

                                                                                                                                              This sequence represents the xylanase from Thermomyces lanuginosus strain DSM 4109. This xylanase, and xylanases derived from Humicola, Thermoascus, Chaetomium, Mucor, Talaromyces, Malbranchea, Myceliophthora, Thielavia, Byssochlamus or Paecilomyces strains can be used in the monocomponent xylanase preparations of the invention. The xylanase preparations and the recombinant Thermomyces xylanase are useful as animal feed additives, which promote in-vivo breakdown of plant cell wall material and thus improve digestibility, growth rate and/or feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Byssochlamus; Paecilomyo plant cell wall; growth

                                            The sequence represents an endo-1,4-beta-D-xylanase from Thermomyces lanuginosus (Humicola lanuginosa), which may be used as a breadimproving additive. The enzyme may be expressed recombinantly from a plasmid pYES2.0 vector in Saccharomyces cerevisiae DSM 10133 (claimed), and may be added to flour at 5-5,000 (preferably 20-2,000) FXU/kg flour, optionally along with other enzymes (amylase, maltogenase, lipase, cellulase, hemicellulase, pentosanase, glucose- oxidase, laccase, protease and/or peroxidase). The enzyme combines particularly well with amylolytic enzymes, and may be used to improve baking properties of flour and/or dough, by increasing volume and improving texture, flavour, crumb softness, freshness and anti-staling properties, while improving dough machinability and stability. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                              The present sequence is the protein sequence of a thermostable xylanase of Thermomyces lanuginosus. The xylanase has a melting temperature (Tm) of 75.0 degrees C at pH 7.0. It is preferred for use in a claimed composition of the invention, which comprises at least 2 thermostable enzymes selected from an endoglucanase, xylanase, phytase, protease, galactanase, mannanase, dextranase and alpha-galactosidase. The composition is useful for improving the nutritional value of animal feeds, especially those containing soya, wheat, barley, oats and/or rye
                                                                                                                                                                                                                                                                                                                                                                                                                            Composition useful as an animal feed additive comprises at least two thermostable enzymes selected from endoglucanase, xylanase, phytase, protease, galactanase, mannanase, dextranase and alpha-galactosidase
                                                                                                                                                                                                                                                                                                                                                                               Disclosure;

               enhanced filterability and/or improved extract yield after filtration) which comprises preparing a mash in the presence of enzyme activities (comprising a xylanase of GH family 10 at at least 15% w/w of the total xylanase and endoglucanase enzyme protein) and filtering (A) to obtain a wort. Also described is a composition is useful for reducing the viscosity of an aqueous solution comprising a starch hydrolysate, which is a mash for beer making or a feed composition. The process is useful for the production of an alcoholic beverage, such as beer or whiskey and the composition is useful in the mashing and filtration step in brewing process. The present sequence represents a xylanase used in the mashing process of the invention.

                                                                                                                                                                                             The present sequence is given in a specification relating to non naturally occurring xylanase activity (XA) proteins. The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp
                                                                                                                                                                                                                                                                                                                                     Non naturally occurring XA protein with enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring Bacillus circulans xylanase is used in an agent for bleaching pulp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bacterial; Bacillus bleaching agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB48543

                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a non-naturally occurring xylanase activity (XA) protein comprising an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase, where the protein has been modified to exhibit enhanced thermophilicity, clarations at least 5 amino acid substitutions. A circulans xylanase, and has at least 5 amino acid substitutions. A cleaching agent comprising a modified xylanase is useful for bleaching bleaching juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. improving the quality of dough, helping bread to rise and processing of the digestibility of feedstuffs and in the washing of super precision devices and semiconductors. The present sequence is a xylanase protein described in the exemplification of the invention
                                                                                                                                                                                                                           Query Match
